- ☎ Safer to use than a handheld?
- ☎ Send and receive text messages
- ☎ Ideal for the elderly, infirm or disabled
- ☎ Hotline call for help feature
- ☎ Designed and made in the UK

What is a Desktop Mobile Phone?

The Burnside P230 desktop mobile phone combines the simplicity of a desktop phone with the flexibility of a mobile phone. Using exactly the same SIM as you use in a mobile phone it enables you to make and receive phone calls using the worldwide GSM network instead of having to use the landline network.

Who should use a Desktop Mobile Phone?

- ☎ Anyone one who has difficulty using a handheld mobile or ordinary telephones.
- ☎ Anyone who is located in a weak mobile signal area.
- ☎ Anyone who is located in any temporary location or where landline telephones cannot and will not be provided.
- ☎ Anyone who wants to avoid the delay and cost of installing landlines.
- ☎ Anyone who uses landline phones to make lots of calls to mobiles and wishes to make much cheaper calls.

How does it compare to other telephones?

The P230 can automatically switch on handsfree when it receives calls from numbers already programmed into its memory keys. This feature enables the caller to talk to anyone within earshot without the called person having to touch the phone making it ideal for those who are either unable or choose not to come to the phone.

How does it compare to a handheld mobile phone?

Easier to Use

Anyone can install it and use it without having to read a manual. Just pick up the handset and dial. When it rings - just pick up the handset or press the HANDS FREE key.

Easier to Dial

The large keys are easy to see and select without making a mistake.

Easier to see the screen

The characters are larger and easier to read on a large backlit screen.

A permanent, shareable and reliable resource.

It normally stays in the same place on the same desktop. So unlike a 'personal' mobile phone it can always be found. Everybody knows where it is - so everyone can use it to make and take calls. It's much less vulnerable to being damaged or stolen.

Never goes flat.

Using the supplied AC mains adapter it will run for ever without failing. However if the power supply does fail it will continue working on its internal backup batteries for at least 48 hours in standby mode.

Works better in poor signal areas

The aerial is much more efficient than a mobile phone aerial—so it's able to work in locations where handhelds refuse to work.

Safer to use?

The most recent study suggests that prolonged use of a mobile phone may increase the risk of brain tumours. By locating the aerial away from your head any risk is considerably reduced.

How does it compare to a landline phone?

Will work anywhere within mobile network coverage.

Ideal for use in locations where landlines are expensive, uneconomic or can never be provided.

Quicker and cheaper to install.

No endless waiting and expense to install a landline. Anyone can get it working in minutes. Ideal for use in temporary locations like rented offices, exhibitions or in any location within mobile network coverage.

Which tariff and network does it work on?

The P230 works on any tariff on any of the four UK GSM networks including Vodafone, O2, T-Mobile, Orange. It does not work on 3G networks.

Do you need help to install it?

If you can insert a SIM in a mobile phone—you will have no problems. It's so easy—you don't even have to read the manual.

Would you like us to supply the SIM as well?

Mobile tariffs can be very confusing—so our knowledgeable staff will advise you on the tariff that will save you the most money.

Would you like to be able to return your P230 if not completely satisfied?

We offer a 14 day trial period during which you can return the P230 for a full refund of the purchase price.
