What is a Desktop Mobile Phone?

The Burnside P230 desktop mobile phone combines the simplicity of a desktop phone with the flexibility of a mobile phone. Using exactly the same SIM as you use in a mobile phone it enables callers to make and receive phone calls using the worldwide GSM network instead of having to use the landline network.

How does it compare to a landline phone?

Works anywhere

Will work anywhere within mobile network coverage. Ideal for use in locations where landlines are expensive, uneconomic or can never be provided.

Quicker and cheaper to install.

No endless waiting and expense to install a landline. Anyone can get it working in minutes. Ideal for use in temporary locations like rented offices, exhibitions, pubs, hotels or airports or in any location within mobile network coverage. Avoids the complexity of negotiating or paying for hire and use of landline from location operator.

How does it compare to a handheld mobile phone?

Easier to Use

Anyone can install it and use it without having to read a manual. Just pick up the handset and the call is made for you. When it rings—just pick up the handset or press the HANDS FREE key.

Easier to see the screen

The characters are larger and easier to read on a large backlit screen.

A permanent, shareable and reliable resource.

It normally stays in the same place on the same desktop or wall mount. So unlike a 'personal' mobile phone it can always be found. Everybody knows where it is - so everyone can use it to make and take calls. It's much less vulnerable to being damaged or stolen.

Never goes flat.

Using the supplied AC mains adapter it will run for ever without failing. However if the power supply does fail it will continue working on its internal backup batteries for at least 48 hours in standby mode.

Works better in poor signal areas

The aerial is much more efficient than a mobile phone aerial— so it's able to work in locations where handhelds refuse to work.

Which tariff and network does it work on?

The P230 works on any tariff on any of the mobile networks in the UK apart from Hutchinson 3G.

Do you need help to install it?

If you can insert a SIM in a mobile phone—you will have no problems. It's so easy—you don't even have to read the manual.

Would you like to be able to return your P230 if not completely satisfied?

We offer a 14 day trial period during which you can return the P230 for a full refund of the purchase price.

About Burnside

Burnside Telecom is a designer and manufacturer of innovative fixed cellular terminals, desktop and wall mounted mobile phones and modems.

Its Follow Me product is already in use by 100's of taxi firms to forward landline line calls to mobiles at no or low cost. Other customers include mobile network operators, government departments, local authorities, police and multi-national companies.
